

1 **Amendment to the Claims**

2 **In the Claims:**

3 Please cancel Claim 9 and amend Claims 1, 10, 18, and 24 as follows:

4 1. (Currently Amended) A method for inserting an image into a document stored in a
5 memory of a computer, comprising the steps of:

6 (a) making an image source device active with an application program used to
7 create a text content of said document, wherein the image source device is in communication with the
8 computer and the computer is executing the application program;

9 (b) acquiring an image using the image source device that is active and under
10 control of the application program; and

11 (c) causing the application program to negotiate with the image source device that
12 is active to determine a set of image capture parameters that control said image source device when
13 acquiring the image; and

14 (ed) communicating data representing said image from the image source device into
15 the memory of the computer so that the data representing said image comprises a portion of the
16 document stored in the memory of the computer, all without saving said data to any permanent file
17 prior to communicating the data into the document stored within the memory of the computer.

18 2. (Original) The method of claim 1, further comprising the steps of:

19 (a) creating a list of all image source devices in communication with the
20 computer; and

21 (b) enabling a user to select the image source device that is active from the list.

22 3. (Original) The method of claim 1, wherein the active image source device comprises one
23 of a scanner and a digital camera.

24 4. (Original) The method of claim 1, wherein the step of acquiring the image comprises the
25 step of scanning a graphic source that has defined edges, further comprising the steps of
26 automatically detecting the edges of the graphic source, and cropping the image at the edges of the
27 graphic source to exclude any portion of a scanned field beyond the edges of the graphic source from
28 the image represented by the data inserted into the document.

29 5. (Original) The method of claim 1, further comprising the step of converting the data
30 representing the image into a compressed format prior to inserting the data into the document.

1 6. (Previously Presented) The method of claim 1, further including the steps of:

2 (a) selecting at least one image enhancement criterion from within the application
3 program; and

4 (b) enhancing said captured image based on said image enhancement criterion,
5 prior to inserting said data representing the image into said document.

6 7. (Original) The method of claim 6, wherein the image enhancement criterion is a contrast
7 level of the image that is adjusted to enhance a brightness of the image within the document.

8 8. (Original) The method of claim 6, wherein the image enhancement criterion is a color
9 level of the image that is adjusted to enhance a color relationship of the image inserted within the
10 document, based on a gamma correction algorithm.

11 9. (Previously Cancelled)

12 10. (Currently Amended) The method of claim 9~~1~~, further comprising the step of
13 determining a set of capabilities of the image source device that is active, wherein the set of image
14 capture parameters are negotiated based in part on the capabilities of said image source device.

15 11. (Original) The method of claim 10, wherein a set of capabilities are associated with the
16 image source devices connected with the computer and are stored in an operating system registry.

17 12. (Previously Presented) The method of claim 1, further comprising the step of
18 determining from within the application program whether the image source device that is active is
19 able to perform an automatic image scan, wherein the automatic image scan comprises the steps of
20 capturing an image of a graphic source with said image source device and inserting the data
21 representing the image into the document, all without requiring a user to select image capture
22 parameters.

23 13. (Original) The method of claim 12, wherein the image source device that is active has an
24 X resolution and a Y resolution and includes a driver that provides a user interface for selecting
25 image capture parameters, the step of determining if said image source device can perform the
26 automatic image scan comprises the steps of:

27 (a) confirming that said image source device can control its X resolution;

28 (b) confirming that said image source device can control its Y resolution; and

29 ///

30 ///

1 (c) confirming that the user interface of said image source device can be bypassed,
2 wherein an affirmative answer to all of the steps of confirming indicates that said image source
3 device can perform the automatic image scan.

4 14. (Original) The method of claim 12, wherein the step of determining if said image source
5 device can perform the automatic image scan comprises the steps of:

6 (a) setting an error flag;
7 (b) attempting to perform an automatic image scan;
8 (c) clearing the error flag if the automatic image scan is successful; and
9 (d) evaluating the error flag during a subsequent use of the image source device,
10 whereby if the error flag has not been cleared, the image source device cannot perform an automatic
11 image scan.

12 15. (Original) The method of claim 12, wherein if it is determined that said image source
13 device can perform an automatic image scan, enabling a user of the application program to
14 selectively cause the image to be acquired and the data representing the image to be inserted into the
15 document, all with a single user control selection.

16 16. (Original) A computer-readable medium having computer-executable instructions for
17 performing the steps recited in claim 1.

18 17. (Original) A computer-readable medium having computer-executable instructions for
19 performing the steps recited in claim 12.

20 18. (Currently Amended) A method for inserting a plurality of images into a document
21 stored in a memory of a computer, comprising the steps of:

22 (a) enabling an image source device user interface from within an application
23 program used to create a text content of the document, wherein the application program is running on
24 the computer that is in communication with an image source device, said image source device
25 acquiring multiple images and storing image source data representing the multiple images, wherein
26 the image source device user interface provides a selection scheme within the application program for
27 selecting a plurality of the images stored in the image source device for insertion into the document;

28 (b) enabling a user to use the selection scheme of the image source device user
29 interface from within the application program to select the plurality of images to be inserted into the
30 document;

1 (c) transferring data representing the images selected from the image source
2 device, to the memory of the computer;

3 (d) converting said data representing the selected image into a compressed format
4 ~~unless said data are already in the compressed format~~; and

5 (e) inserting said image data in the compressed format into the document stored in
6 the memory of a computer so that the document includes the plurality of images without saving said
7 image data in the compressed format to any permanent file prior to inserting the image data in the
8 compressed format into the document stored in the memory of the computer.

9 19. (Original) The method of claim 18, wherein the application program is a word
10 processing application, and the plurality of images are inserted into the document as a plurality of
11 tiled images.

12 20. (Original) The method of claim 18, wherein the application program is a spreadsheet
13 application that produces a spreadsheet document, and the plurality of inserted images are inserted
14 into the spreadsheet document as a plurality of cascaded images.

15 21. (Original) The method of claim 18, wherein the application program is a presentation
16 design application, and the plurality of inserted images are inserted into a presentation document as a
17 plurality of individual slides.

18 22. (Previously Presented) The method of claim 18, further including the step of performing
19 a postprocessing modification to said data from within the application program to enhance a quality
20 of the plurality of images.

21 23. (Original) A computer-readable medium having computer-executable instructions for
22 performing the steps recited in claim 18.

23 24. (Currently Amended) A system for inserting an image into a document, comprising:

24 (a) a computer having a memory and a processor, the memory storing:

25 (i) machine instructions that are executable on the processor; and

26 (ii) the document;

27 (b) an application program comprising the machine instructions that are stored in
28 the memory, a text content of said document being editable using the application program;

29 (c) an image acquisition device connected in communication with the computer, to
30 provide image data representing an image to the computer;

1 (d) a source driver module comprising computer-executable instructions stored in
2 the memory and in communication with the image acquisition device so as to control acquisition of
3 an image by the image acquisition device for transfer as the image data, into the memory of the
4 computer;

5 (e) a source manager module comprising computer-executable instructions stored
6 in the memory and in communication with the source driver module, the source manager module
7 providing commands to the source driver module to acquire an image using the image acquisition
8 device, such that the application program negotiates with the image acquisition device that is active
9 to determine a set of image capture parameters that control said image source device when acquiring
10 the image; and

11 (f) an interface module comprising computer-executable instructions stored in the
12 memory and in communication with the source manager module and under control of the application
13 program, the interface module providing commands to the source manager module to acquire an
14 image using the image acquisition device, the interface module inserting the image data representing
15 the image into the document that is stored in the memory of a computer without saving said image
16 data to any permanent file prior to inserting the image data into the document stored in the memory
17 of the computer.

18 25. (Original) The system of claim 24, wherein the application program is a word processing
19 application.

20 26. (Original) The system of claim 24, wherein the application program is a spreadsheet
21 application.

22 27. (Original) The system of claim 24, wherein the application program is a presentation
23 design application.

24 28. (Original) The system of claim 24, wherein the source manager module complies with
25 the TWAIN communication specification.

26 29. (Original) The system of claim 24, wherein the application program is able to request the
27 interface module to acquire an image by issuing a single procedure call to the interface module.

28 ///

29 ///

30 ///

1 30. (Original) The system of claim 24, wherein the application program provides a user
2 interface that enables a user to acquire an image from the image acquisition device and insert the data
3 representing the image into the application program document by selecting a single application menu
4 option and performing a single subsequent user action.

5 31. (Previously Presented) The system of claim 24, wherein the interface module comprises
6 additional computer-executable instructions for enhancing the quality of the captured image from
7 within the application program, the captured image quality being enhanced prior to inserting the data
8 representing the image into the application program document.

9 32. (Original) The system of claim 24, wherein the image is acquired by scanning a graphic
10 source that has edges, and the interface module comprises additional computer-executable
11 instructions for detecting the edges of the graphic source so as to automatically crop a scanned field
12 to include only the portion of the scanned field included within the graphic source in the image, the
13 image being so cropped prior to the data representing the image being inserted into the document.

14 33. (Original) The system of claim 24, wherein the interface module comprises additional
15 computer-executable instructions for converting the data representing the image into a compressed
16 format, said data being converted into the compressed format prior to being inserted into the
17 document.
